Notice No. 0110

For AB Owning Organizations Implementation and Information Only to Other Organizations

Requirements of Safety Basis Documents Submitted to the PS-OAB for Review

Background

LIR 300-00-06, "Nuclear Facility Authorization Basis," requires that Nuclear facilities shall have a safety basis (SB) that meets the requirements of 10 CFR 830, Nuclear Safety Management Rule. OST- 300-00-06F, "LANL review Plan for Nuclear Safety Analysis Documents," is used as the basis to review SB documents for compliance with the LIR and 10 CFR 830 before submitting SB documents to DOE/NNSA for approval. Many of the SB documents that were reviewed by PS-OAB have not met the quality requirements cited in OST 300-00-06F. SB document submittals have been delayed and, in some cases, rejected by DOE/NNSA due to quality issues.

Applicability

The requirements contained in this notice shall apply to all organizations that submit SB documents to PA-OAB for review.

Requirements

Effective immediately, the SAR/TSR Checklist in Chapter 5 of OST 300-00-06F shall be used to develop Document Safety Analysis (DSA) and Basis for Interim Operations (BIO) documents. In addition, the applicable sections of the checklist shall be filled in and accompany any draft DSAs or BIOs that will be officially reviewed by PS-OAB.

Guidance Note: A copy of the OST may be obtained by contacting the PS-Office of Authorization Basis or at the following website:

http://www.oab.lanl.gov_R1.pdf

Questions?

Contact David Satterwhite, PS-OAB, for additional information (5-0513 or dgsx@lanl.gov).

The OIC for this notice is PS-OAB, and the responsible division leader is PS-DL. The notice will remain in effect until this requirement is incorporated into the next revision of LIR 300-00-06, Nuclear Facility Safety Authorization.
